Composite Characteristics: The composite was created April 1, 2006. Prior to 3/31/08, the composite included accounts with investment policy constraints. After 3/31/08, no accounts with constraints are included in the composite. Composites have always included accounts to which clients may make contributions or from which they may take withdrawals. The Composite Benchmark is currently 100% S&P 500 Index. This benchmark has been in effect since the inception of the portfolio on 4/1/2006. The S&P 500 index measures the performance of 500 large cap stocks, which together represent about 75% of the total US equities market.

The Composite is designed to meet investor needs for diversified portfolio solutions with defined risk objectives. The Long-Term Growth Composite targets an investor that would typically own a portfolio represented by 100% large-cap equities. The portfolio manager may depart from the targeted allocation range when he or she feels that certain sectors of the financial markets are significantly over or under valued.

Calculation Methodology: The Composite includes all fee-paying, full discretionary portfolios managed by the Advisory Services Group of Wachovia Securities, LLC (later RiverFront Investment Group), in this respective style. The performance provided for the Composite is prepared using full accrual, trade-dated accounting conventions. Dividends and interest on fixed income securities are accrued as earned and interest on cash balances is recognized on a cash basis. The performance returns are asset-weighted and calculated using beginning-of-month market values plus time-weighted cash flows. Portfolios are valued monthly and are linked geometrically to produce quarterly and annual returns. Total returns including realized and unrealized gains plus income are used when calculating investment performance. Pure gross performance returns are calculated before the deduction of trading expenses or advisory fees. The fees for the composite are calculated on an account-by-account basis to produce a net-of-fee return for each account which is then weighted with all of the accounts' net returns in the composite to arrive at the net-of-fee return for the composite. The net of fees return is the pure gross return netted down by the actual wrap fee includes custodian fees, trading expenses, management fee, reporting fees, etc. All returns and valuations are in U.S. dollars.

The dispersion measure is the asset-weighted standard deviation of accounts in the composite for the entire year.

Other Disclosures: Fees do not cover the fees and expenses of underlying exchange-traded funds, closed-end funds or mutual funds in the portfolio. Any particular client's account performance may differ from the composite results due to, among other things, commissions, timing of order entry, or the manner in which the trades are executed.
